Who did what

Name	Work done
Tahjib Al Sakin	Compared Discovery (*Euthyphro*) vs Persuasion (Galileo's *Dialogue*); evaluated Gemini, ChatGPT and Claude under Socratic probing; wrote AURA's Socratic system prompt; ran the live Gemini run (transcript and run log).
Rafid Mohammad Ahsan	*Protocol:* modelled the elenchus as a state machine (P_0, probe, counter-example, contradiction), the refinement loop P(k+1) and stopping criteria (definition vs aporia), JSON-RPC markers and error codes. *Core:* built the runnable engine (state machine, 3-persona debate, sycophancy probe) for Gemini/ChatGPT/Claude, with logs, tests and repository layout.
Kunal Choudhary	Cast Salviati, Simplicio and Sagredo; designed the thought experiment *The Noosphere Weights* (open-sourcing frontier models); audited how multi-agent debate reduces sycophancy and bias.
Mubina Rahaman Jerin	Checked the engine against the EU AI Act (prohibited practices, high-risk classification, Article 50 transparency); reviewed API-key handling, personal data, prompt injection and unsafe verdicts; listed fixes before deployment.

Moodle submission (3 files): `00_Team_Roles.pdf` · `Mission01_Role_Deliverables_01-03.pdf` (Parts 1–3, one section per role) · `06_AI_Act_Compliance.pdf`. Each role document is also a separate PDF in the repository (`mission-01/pdf/`); Part 4 (code, transcript, tests) is in the repository.
